### **ABSTRACT**

Enrollments in the Los Angeles Community College District (LACCD) have been affected by the area's slow local economy, shrinking aerospace and defense industries, the recent major earthquake, and the threat of more proposed fee increases. Since 1981-82, full-time equivalent (FTE) enrollments in the district have Eluctuated. In 1993-94, both fall and spring enrollments declined from the previous 2 years, due mainly to losses in new students and Bachelor's Degree holders. The fall 1993 new student population is 75% of that in fall 1992, while the number of Bachelor's Degree holders is less than two-fifths of the number from 2 years ago. The LACCD's recent downward enrollment trend is contrary to the expanding source of college students. Some possible causes of the enrollment declines include a lack of sufficient entry-level English and math classes, which are pre- or co-requisites of almost all programs; and disproportionately low graduation and transfer rates for Hispanic students, who represent the main source of students. Without effective enrollment strategies, such as specifically designed recruitment strategies, educational programs, and support services, the LACCD may lose another 5,000 FTE students in the next 2 years. ## RISING TO THE ENROLLMENT CHALLENGE

### **EXECUTIVE SUMMARY**

Enrollmen, in the Los Angeles Community College District (LACCD) continues to be one of the top concerns of the decision-makers in the district. In this report, the author attempts to generate a short-term enrollment projection and examine some enrollment management factors, based on actual data.

- A 15-year trend (1981-1995) of the LACCD's Full-Time Equivalent Student (FTES) suggests a "roller coaster" pattern: the district's FTES dropped from 84,000 in 1981-82 to 57,000 in 1985-86, then slowly climbed back to 71,500 in 1991-92. However, the Spring 1993 fee increase and the Spring 1994 Northridge earthquake, among other factors, reversed the growing trend and pushed the FTF′ jown to 65,356 in 1993-94. Without any innovative enrollment management strategies, the district may lose another 5,000 FTES in the next two years, before enrollment recovery occurs.
- In 1993-94, both Fall and Spring enrollment declined from the previous two years. The final first census enrollment decreased by 2,000 between Fall 1991 (116,940) and Fall 1992 (114,917), and slipped 13,000 further between the last two Fall semesters (101,857 in Fall 1993). Meanwhile, the Fall WSCH dropped by 103,350 in two years.
- This recent enrollment decline is mainly due to losses in new students and BA recipients. The new student population in Fall 1993 (27,807) is 3/4 of that in Fall 1991 (36,352). Its proportion decreased from 36% in Fall 1987 to 31% in Fall 1991, and then to 27% this Fall. On the other hand, the number of BA recipients this Fall (3,463) is less than 2/5 of the number two years ago (8,887). BA recipients used to represent 8% of the overall student body; today they comprise less than 3.5% of the entire LACCD student population.
- The LACCD's recent downward enrollment trend is contrary to the expanding sources of college students. The number of LA Unified high school graduates grew from 22,811 in 1989-90 to 25,044 in 1992-93. Meanwhile, the college-age population (18-34) in the LACCD service area increased by 266,000 or 20% between 1980 and 1990. The under-18 population, a source of our potential students for the next 15 years, also grew by 127,000 or 11.28%.

- The proportion of Hispanic students at the LACCD continues to grow, from 33.7% in Fall 1991 to 37.6% in Spring 1994. The major contributor of this growth has been the increasing number of Hispanics in both LA Unified high school graduating classes and the college-age population within the district's service area. Seven out of the nine LACCD colleges are located in neighborhoods where Hispanics represent the largest portion of minors (under 18) and young adults, with the exception of the Pierce and West service areas, where the white population is still predominant.
- In examining some possible causes of the recent enrollment declines, two findings have emerged. First, the nine LACCD colleges may not have offered enough entry-level English and Math classes, which are pre- or co-requisites of almost all programs. This course shortage may be the bottleneck of our student recruitment and retention. Second, the district proportionally transfers and graduates fewer Hispanics than it recruits; the figures are the reverse for Native Americans, Asians and Pacific Islanders, blacks, and whites. As mentioned earlier, Hispanic students seem to be the main source of students; if the LACCD fails to adequately serve these students, further enrollment loss will be inevitable.
- To maintain a healthy enrollment and to ensure all students' success, the district needs to specifically design recruitment strategies, educational programs, and support services, for the students it needs to serve.

## INTRODUCTION

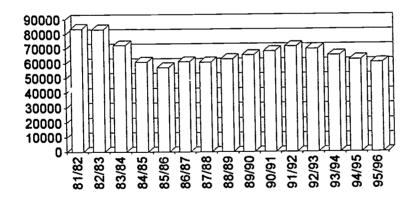

Decision-makers at the Los Angeles Community College District (LACCD) continue to express their concerns about district's declining enrollment, due to factors such as: a slow local economy, the shrinking aerospace and defense industries, the recent 6.7 earthquake, and the threat of more proposed fee increases. A special concern has been the impact of these factors on the ethnic minority enrollment. In this report, the author attempts to generate short-term enrollment projections and examine some enrollment management factors, based on actual data.

# FULL TIME EQUIVALENT STUDENTS (FTES) -- A 15 YEAR TREND

1981-82 to 1992-93 Actual and 1993-94 to 1995-96 Projections 1

Chart 1 presents a 15-year trend of the LACCD's Full-Time Equivalent Student (FTES).<sup>2</sup>

Chart 1. LACCD Full-Time Equivalent Student (FTES), 1981-86 Estimates, 1987-92 Actual, and 1993-95 Projections

<sup>&</sup>lt;sup>2</sup> The measure of full-time attendance is used to calculate state reimbursement since June 1991. It is based on a figur 3 of 30 hours per full-time student over the academic year. Average Daily Attendance (ADA), a measure of annual full-time attendance based on student class hours, was the basis of the measure prior to 1991.

<sup>&</sup>lt;sup>1</sup> LACCD's FTES of the following two years was projected based upon mainly (1) the 15-year enrollment trend; (2) LACCD students' opinions regarding the fee increase, obtained through the State Chancellor's Office Student Survey; and (3) recent State immigration and out-migration patterns.

As shown in Chart 1, during the first half of the 80's, the LACCD's enrollment dropped by a third, from an all-time high of approximately 84,000 in 1981-82 to 57,000 in 1985-86. This decline was caused by many factors, including the changing college-age population, the imposition of community college fees, and enrollment free flow to neighboring districts. The latter two factors pushed enrollment all the way down to its nadir, although enrollment had started to decline before the free flow and fee policies were implemented.

From it 1985-86 nadir, the district FTES slowly climbed back to 71,500 in 1991-92. However, the fee increase passed in August 1992 by the California legislature hurt LACCD enrollment in Spring 1993. The Spring enrollment decline brought the 1992-93 annual FTES down to 69,770.

As indicated in Charts 2 and 3, LACCD's enrollment pattern in general has closely followed the State's. However, the district has been experiencing steeper falls, followed by slower recoveries than the State. The two enrollment trends may be parallel because they have been affected by similar statewide policies, e.g., fee increases. Differences between the two trends may be caused by the fact that the State has 107 colleges, whose diverse enrollment patterns may counterbalance each other much easier than the LACCD, which has only nine colleges, all located in Los Angeles County.

The 1993-94 FTES is projected to drop from last year's 69,770 to 65,427. This means that the LACCD may lose as much as 4,000 FTES in one year. Without innovative enrollment management strategies, the district may lose another 5,000 FTES in the next two years, before enrollment recovers (Chart 1).

## **Enrollment Related Funding Concerns**

The District's attendance apportionment funding has been based upon FTES since Fall 1991. Chart 4 presents the district's funded and unfunded ADA/FTES by apportionment or supplemental funding between 1988-89 and 1992-93, and the projected FTES for 1993-94.

The district enrollment has been above the cap over the last five years. When ADA/FTES is over the cap, a significant proportion of basic skill enrollment, including students enrolled in Amnesty and GAIN programs, would be covered by supplemental funding. Due to high enrollments between 1990-91 and 1992-93, approximately 2% of LACCD's FTES was not funded by any of the State's reimbursement.

Chart 2. LACCD UN DUPLICATED CREDIT ENROLLMENT, FALL 1972 - FALL 1993

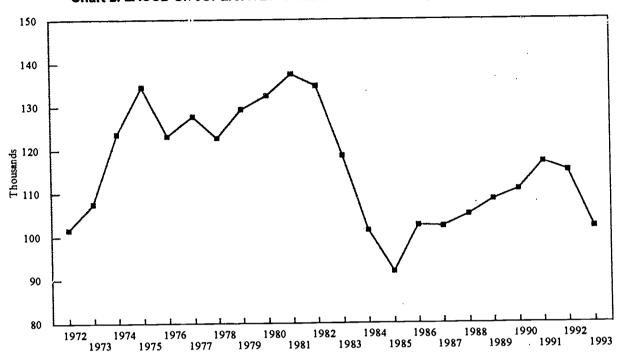

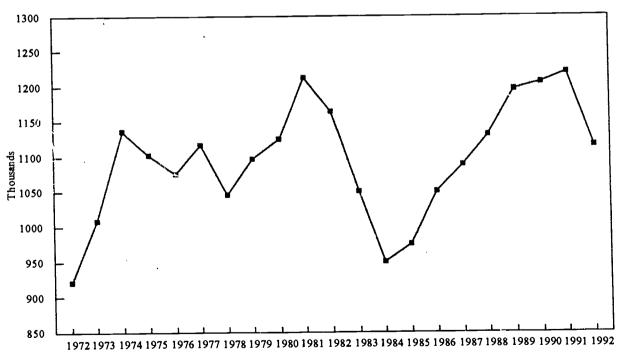

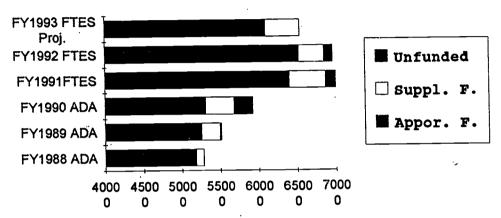

Chart 3. UNDUPLICATED CREDIT ENROLLMENT IN CALIFORNIA COMMUNITY COLLEGES FALL 1972 - FALL 1992

However, it will be a different story in the near future. Since enrollment growth is encouraged, the enrollment cap for next year is set by subtracting last year's funded FTES from this year's to be funded FTES. Lower enrollment this year may be translated into a smaller funding base for next year, which means fewer course offerings. This chain reaction will further push the district's enrollment into the downward spiral.<sup>3</sup>

Chart 4. LACCD ADA/FTES, Unfunded, Funded by Apportionment or Supplemental Funding, FY1988-FY1993

## FOUR ENROLLMENT MANAGEMENT FACTORS

In face of these alarming facts, the LACCD is urgently in need of some possible solutions. In this study, four major enrollment management related factors are examined: (1) recent trends in enrollment and student characteristics, (2) source of students, (3) composition of the student sources, and (4) how well have various LACCD student groups been served?

## Recent Enrollment Trends and Student Characteristics

Table 1 presents districtwide enrollment information for six consecutive semesters between Fall 1991 and Spring 1994. In addition to enrollment headcount, this Table displays WSCH, the number of BA recipients, and selected characteristics of the entire student body, including ethnicity, entering status. and hour load. The same information is presented in Appendix Tables 1-9 for the nine colleges.

<sup>&</sup>lt;sup>3</sup> Chen, M. Into the Downward Spiral, Educational Services Division, Los Angeles Community College District, June, 1993.

Source: Student Data Tape 551 and Matriculation Evaluation Data System (MEDS) data base.

(1) Ethnicity does not include the "other" category.

After an analysis of enrollment changes between Fall 1993, Spring 1994 and prior semesters, six major findings emerge:

## First, both districtwide enrollment and WSCH continue to decline.

In Fall 1993, first census enrollment declined by 12,117 or 11% from the previous fall. WSCH decreased by 8 %. Further, Spring 1994 enrollment is 4,508 lower than that of the previous Spring, and Spring WSCH declined by 3%. The fee increase that occurred in Spring 1993 seemed to continually and negatively affect the enrollment in Fall 1993; the Fall 1993 enrollment headcount is even lower than the figure of the previous Spring. This pattern is opposite to the regular Fall-Spring enrollment variation. Luckily, enrollment has recovered slightly in Spring 1994. As a result, the 1993-94 fall-to-spring enrollment ratio of 1 to 0.965 is higher than the 92-93 ratio of 1 to 0.895. It is even slightly higher than the normal ratio, e.g., 1 to 0.956 in 1991-92.

Second, the number of BA recipients continues to drop, after a significant decline occurred last Spring when the differential fee was charged for the first time.

In Fall 1993 the district had 4,886 fewer BA recipients than in the previous Fall, and another 1,296 loss occurred between the two recent Spring semesters. This drop suggests that the differential fee continues to prevent many potential students who have received baccalaureate degrees or even advanced degrees from enrolling in the district's nine colleges. The size of the BA recipient student population in Fall 1993 (3,388) was less than 2/5 of those students two years before (8,887 in Fall 1991).

Third, the proportion of Hispanic students continues to grow; their population represents 37% of the 1993-94 student body.

The Spring 1994 Hispanic student body experienced a growth of 477 from last Spring. This was the only positive Spring 1993-Spring 1994 Change shown in Table 1. On the other hand, the white student population continues to decline in number as well as in percentage. Asians have grown slightly while blacks have declined marginally (Chart 5).

Fourth, LACCD has been losing new students. The new student population in Fall 1993 is 3/4 of that in Fall 1991, while its size in Spring 1994 is 4/5 of that of the comparable semester two years ago.

As shown in Chart 6, the proportion of the district's new students has been declining for six consecutive years (36% in Fall 1988, 27.1% in Fall 1993). Although LACCD seems to be able to retain continuing students — the group suffered the least decline in percentage among the three entering status categories (Table 1) — those students will eventually graduate, transfer, or leave. The new student serves as the

beginning cohort of the student flow. Therefore, the shrinking number and percentage of new students should be a top concern for decision-makers in the district.

Chart 5. LACCD Enrollment by Ethnic Percentage Distribution, Fall 1985-Fall 1993

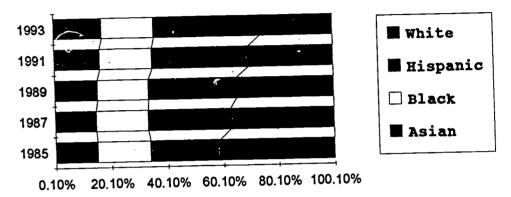

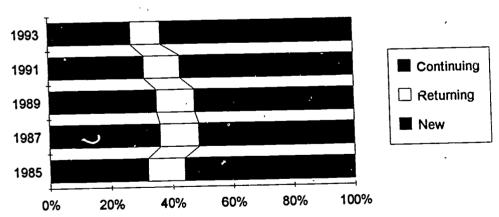

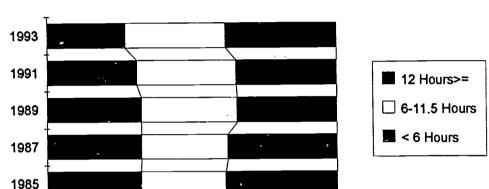

Chart 6. LACCD Enrollment by Entering Status Percentage Distribution, Fall 1985-Fall 1993

Fifth, the proportion of students taking heavier hour loads continues to grow (Table 1 and Chart 7), which explains why WSCH has had a moderate decline when compared to headcount.

The number of students taking fewer than 6 hours declined the most (-9%) between the two recent Spring semesters, followed by students taking between 6 and 11.5 hours (-4%), and those taking 12 hours or more (-1%). This may suggest that fewer casual students are enrolling in LACCD than before.

60%

0%

20%

40%

Chart 7. LACCD Enrollment by Hour Load, Fall 1985 - Fall 1993

Finally, approximately 1/3 of our Fall 1993 students reported that they attend the nine colleges for career reasons.

80%

100%

As presented in *Table 2 and Chart 8*, the trend in LACCD students' educational goals<sup>4</sup> indicates that higher proportions of students attend our colleges not to earn a degree but to find new careers or to maintain their current careers. The proportion of the Career-No Degree group increased from 20.8% in Fall 1990 to 31.7% this Fall. Meanwhile, more of our student applicants have decided on goals than they did before; the proportion of undecided/unknown group dropped from 33.7% in Fall 1990 to 24.8% in Fall 1993.

The proportions of students seeking 2-year degrees (9%) or intending to transfer (27%) have remained relatively steady since Fall 1990. Again, the latter data may suggest that "redirected students" have not yet rushed to LACCD colleges.

<sup>&</sup>lt;sup>4</sup> These data are generated directly from students' application forms, filled out before they have seen a counselor.

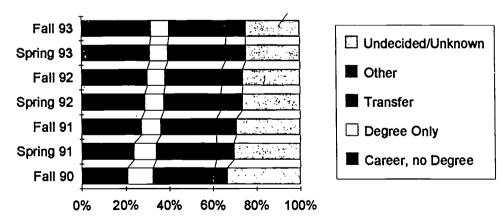

Table 2. LACCD Student Educational Goals, Fall 1990-Fall 1993

Chart 8. LACCD Student Educational Goals, Fall 1990-Fall 1993

## Source of Students

LA Unified high school graduates. LA Unified high school graduates have been the main suppliers of our freshmen. Over half of the LACCD's freshmen have attended or graduated from LA Unified. Therefore, recent trend in LA Unified high school graduating class size has been studied. Chart 9 suggests that after a slight decline between 1988-89 and 1989-90 (-990), the number of the graduates has grown from 22,811 in 1989-90 to 25,044 in 1992-93 (+2,233). This growth suggest that LACCD may have sufficient supply for freshmen.

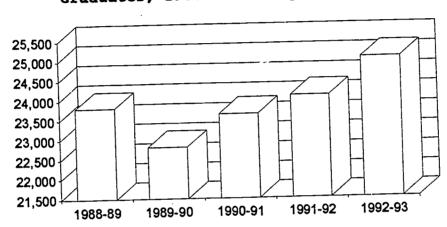

Chart 9. L.A. Unified High School Graduates, 1988-89 through 1992-93

College-Age population in LACCD service area. <sup>5</sup> The 1990 Census reveals that there is an overall population increase over the last ten years in LACCD service area (+636,686) (Table 3). Moreover, the sizes of the three college-age population groups (18-19, 20-24, and 25-34) have all grown (the increases are 4.18%, 9.72%, and 28.37%, respectively). The population age 35-54 expended 28.18% between 1980 and 1990. Population under 18 years old is also enlarged by 11.28%. Age 55 and over is the only group that experienced a decline (-17,020); LACCD recruits few students from this age group.

The population in the LACCD service area was classified into 24 age/ethnicity subcategories. The overall population increase is mainly due to the growth of Hispanics and slightly due to the increase of Asians. As shown in both Table 3 and Chart 10, these two groups enjoyed increases in all age groups. Both the overall population of black and white declined in the LACCD service area, the decline occurred

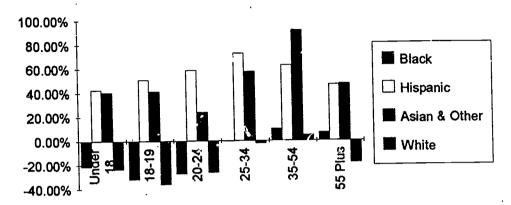

18

<sup>5</sup> LACCD service area is identified by zip-codes surrounding the nine colleges.

entirely in the current (18-19, 20-24, and 25-35) and future college-age subcategories (under 18).

Chart 10. LACCD Service Area Population by Age and Ethnicity, 1980-1990 % Change

## **Composition of LACCD Student Sources**

Source of Freshmen. The growth in LA Unified high school graduates, mentioned above, was caused mainly by an increase in Hispanic students. As shown in Chart 11, the number of Hispanic graduates grow 40% in five years, from 9,787 in AY 1988 to 13,651 in AY 1922. Both Asians and blacks decreased slightly (-299 and -584, respectively), while whites declines by on-third from 6,224 in AY1988 to 4,408 in AY 1992. As a result, the 1992-93 LA unified graduating class was composed of 46% Hispanics, 21% whites, 15% blacks, 12% Asians, and 6% others.

LACCD Service Area Population. Chart 12 presents the 1990 Census population in the district service area by age and ethnicity. Table 4 displays age and ethnic breakdown for the nine colleges as well as the district as a whole. As mentioned previously: the groups under 18 years of age would be LACCD's potential students for the next 15 years; the 18-19 age group is the main source for our freshmen, while 20-24 and 25-34 are the sources for our overall student body. These are the people we are serving, or whom we should be serving but are not, for some reason.

Chart 12. Age and Ethnicity of Population in LACCD Service Area

Two major findings emerged through the examination of the data shown in those charts and Table 4.

First, Hispanics make up the largest ethnic group in the LACCD service area.

The Hispanic population comprises 42% of the ovall population in the district's service area. Further, they represent more than half of minors (under 18) and young adults (18-24). Whites lagged behind Hispanics, comprising only 35% of the overall population, followed by blacks (12%) and Asian/Other (11%). Among minors and young adults, the population of Hispanic origin comprises more than half of the overall population in the district service area, while all other ethnic groups comprise the remaining part.

Second, seven out of the nine colleges are located in neighborhoods where Hispanics represent the largest portion of minors and young adults. The Pierce and West service areas are the two exceptions, where the white population is still dominant.

Hispanics represent over 80% of the population in the service area of East Los Angeles College, and 70% in the Trade-Tech area. The age breakdowns further indicate that the Hispanic population may be in the process of taking over the other five college service areas that used to be predominately white or black.

# How Well Have Students Been Served in the LACCD?

Data presented above suggest that first, the LACCD should have sufficient sources for freshmen; and second, the student body is and will continue to be composed of people with truly diversified age and ethnic backgrounds. Then the questions become: "Do we fulfill the needs of our freshmen by offering enough entry level courses?" and: "How well have different ethnic groups been served by LACCD?"

Entry Level Courses. One of the methods to answer this question — course enrollment status of the entry level English and Math<sup>6</sup> — was examined two weeks before the Fall 1993 semester began. Two major findings emerged:

First, districtwide, 85% of sections were full two weeks before the Fall 1993 semester began.

Second, at six out of the nine colleges, over 95% of sections were full two weeks before the Fall 1993 semester began.

These two findings may lead to the assumption that these entry-level sections would be full at all coileges before the start of classes. Knowing the fact that (1) Fall is the main semester in which the nine colleges recruit new students, and (2) continuing students, rather than new students, have priority in gaining entrance to classes; the author believes that it would be very difficult for newly arrived students to enroll in entry-level English and Math courses, which are pre- or co-requisites of almost all programs. This is one of the indicators that confirm comments often made by administrators, faculty members, and students that the district does not offer enough English and Math courses. Moreover, potential new students may be turned away and decide to attend other colleges instead. This may also help to explain the reason why the number of new students in the district is declining.

**NOTE:** On September 1, 1993, there was a Board Action to allocate \$5 million to the colleges for classes and instruction purposes only.

<sup>&</sup>lt;sup>6</sup> This status report was run on August 12, 1993. Entry-Level English courses include English 20 to 101, while math includes Math 105 to 125.

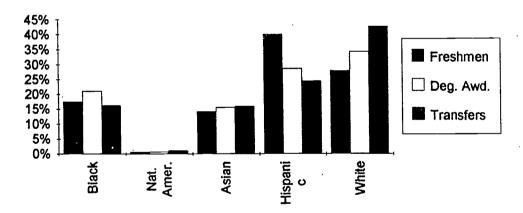

<sup>&</sup>lt;sup>7</sup> In Fall 1993, when the LACCD Office of Research and Planning was composing the 1993 LACCD Student Survey, this commend was made by all types of LACCD members interviewed on several campuses by the Research staff.

Equity Progress. One of the Student Equity indicators requests the district to examine ethnic distributions of freshmen, graduates, and transfers. In this study, ethnic distributions of Fall 1989 first-time degree-seeking freshmen<sup>8</sup> were compared with those of Fall 1990 transfers to UC and CSU campuses, and those of 1991-92 graduates.<sup>9</sup> Chart 13 displays districtwide data, while Table 5 presents information at the college level.

Data shown in both Chart 13 and Table 5 suggest that, in proportion, the district graduates more blacks (17.3%) than it recruits (16%) or transfers (14%). As for Native Americans, Asians, and whites, the district also graduates and transfers more than it recruits. However, the figures for Hispanics are the reverse: LACCD recruits far more Hispanic students (36.4%) than it either graduates (23.4%) or transfers (21.3%).

These data may suggest (1) different levels of college-readiness for different ethnic groups, and (2) divergent degrees of support that LACCD has been providing to various groups of students.

Chart 13. LACCD: Ethnic Distribution of F89 Degree-Seeking Freshmen, 91-92 Graduates, and F90 Transfers

<sup>&</sup>lt;sup>8</sup> The Fall 1989 first-time degree-seeking freshman cohort is established by identifying students enrolled in LACCD for the first-time in Fall 1989 with no transfer credits, and who reported their educational goals as seeking a community college certificate or degree, or transferring to a senior institution with or without a 2-year college degree/certificate.

<sup>&</sup>lt;sup>9</sup> The main reason of selecting these three groups for comparison is under the assumption that those degree-seeking freshmen may transfer to UC or CSU one year or graduate three year after they enrolled for the first-time at the nine Los Angeles Community Colleges.

### RECOMMENDATIONS

Compared to the ethnic composition of our local college-aged population, LACCD has been successfully educating higher proportions of whites, Asians, and blacks, but lower proportions of Hispanics. The rapidly growing Hispanic population is and will continue to be the ethnic majority in the LACCD service area. Hispanics are in general young, limited English proficient, coming from disadvantaged socio-economic backgrounds, and without educated role models. These traits may explain the reverse relationship between the growth of the Hispanic population in the district service area and the decline of overall district enrollment, especially the decreasing number of new freshmen.

These data suggest that the district needs to ensure all of our students' success by further studying the characteristics of all population in our service area, especially Hispanics. Accordingly, LACCD will design specifically for various types of students:

- (1) recruitment strategies,
- (2) educational programs, and
- (3) support services.

By doing this, LACCD may:

- Enhance the quality of the current and future local work force, (1)
- Keep business and industries that would otherwise consider relocating, (2)
- Assist in improving the economy in the greater Los Angeles Area, (3)and the most important.
- Enable the district to come out of its downward spiral as soon as possible. (4)
